Tittle: Software Engineer

Software engineering, a discipline so true

Building the future, with code and crew

From an idea to a product, it's all in the view

Creating solutions, that make the world anew

With each line of code, a challenge to face

Debugging and testing, the race to keep pace

Collaborating with others, a tight knit space

Building systems, that run with grace

The computer's language, a tool to express

Algorithms and logic, the mind's finesse

Turning complexity, into a work of art no less

Making technology, a seamless success

Software engineering, a field of growth

Constantly changing, with a pace that shows both

Opportunities and challenges, that come with a cost

But the reward is great, for those who've made the boast.
